

Handled before you walk in

A layer over the PMS and the inbox you already run. It works overnight and leaves your morning done.

WHAT IT DOES TODAY

The day's brief

Written before reception opens: arrivals, departures, VIPs, unconfirmed ETAs and whatever needs your eye.

Guest email, drafted

Replies written in the hotel's voice, each email matched to its reservation. You review them.

Arrival times

Unconfirmed ETAs chased automatically, so housekeeping stays ahead.

Questions about the day

Answered in plain language: "how many rooms are left to clean?".

WHAT IT CONNECTS TO

MEWS through its official API. Gmail through OAuth, with the same permissions as any mail client. Nothing to migrate.

WHAT IT DOES NOT DO

- It doesn't change any data in your PMS.
- It sends no email without your review and approval.
- It replaces nobody at reception — it takes the admin off them.

ARRIVING DURING THE PILOT

Pre-arrival extras at your own prices · a rate signal in the brief · the brief on WhatsApp.

PILOT

30 days free, full access, one 30-minute setup call and one feedback call. No contract, no card. After that, €199/month per hotel, flat — less than one room-night.

DATA

Stored encrypted and hosted in the EU, used only to produce your briefs and drafts, and deleted if you leave. The hotel is the data controller; Fondas is the processor.
